

Live Line Electric Safety Demonstration

PPL Electric's Live Line Safety Exhibit is a scaled down 7,200-volt electrical distribution grid featuring live electrical wires, utility poles, a transformer and solar panels. Using ladders, gloves, shovels and various other objects in a controlled environment, trained PPL staff, wearing tested personal protective equipment, will create arcs and sparks that can occur as a result of contact with energized electrical equipment – above and below ground.

During this hour long presentation, the visuals and lessons provided will help reinforce the importance of safety awareness around power lines and other electrical equipment.

Wednesday, October 29, 2025

11:30 AM

Hartzell Hall Parking Lot

Join us for an exciting and eye-opening electrical safety demonstration.

**Open to Everyone –
Students, Staff & Community Members**
